

Software Partners Verifies Compatibility of TAPESYS and JB Products on HP Integrity Servers Running OpenVMS

Topsfield, Mass., February 15, 2007 – Software Partners, Inc. announced that TAPESYS for OpenVMS is now compatible with OpenVMS versions V8.2, V8.2-1, and V8.3 running on HP Integrity servers.

TAPESYS for OpenVMS provides complete management of all backups, media rotation, and on-demand file restoration in the event of loss, deletion or system-wide disaster. TAPESYS also provides ready access to tape content and history, and includes a thorough vault management component for sites that store media remotely. It includes JB, an extensive jukebox management component, as well.

“TAPESYS is well into its third decade of service at some of the world’s largest computer centers, and the porting of our software onto Integrity servers running the latest versions of OpenVMS is providing us new lift for product sales and services into sites we never knew existed,” said Phil Jamieson, president of Software Partners, Inc. “We are delighted to provide this new-generation market with our venerable, time-tested software, and we’re gratified to have our veteran user community tell us that they are moving forward, with us, onto the Integrity platform.”

“Seeking the ideal backup and restore product is crucial to ensuring smooth business operations and continuous application availability,” said Michelle Weiss, vice president of marketing, Business Critical Systems, HP. “TAPESYS on HP Integrity servers running OpenVMS protects customers’ mission-critical applications and offers robust disaster tolerance and 24x7 uptime.”

Software Partners offers telephone support for clients installing TAPESYS on HP servers. In addition, Software Partners also works with clients running TAPESYS on legacy systems and legacy versions of OpenVMS.

About Software Partners
